2. The following is an examiner's statement of reasons for allowance:

Frank (US Pat. 982 B1) discloses a system in which a radio tower communication system 308 connected to a radioactive detection unit 202, which provides continuous monitoring along with local processor unit 203 for analyzing the inputs from chemical, biological and radioactive detection units to determine if an alarm condition is present (col. 4, lines 41-67), once detection device 201, 202 detects a hazardous material, an alarm message will be sent over wireless link 205 (col. 4, lines 63-67; col. 5, lines 1-13).

Cephus (US Pat. 968) discloses a system 10 in which a group of sensors are connected to a microcontroller/multiplex system 48. The system includes a transceiver system 52 in which the a coded signal may be transmitted and received by the system 10 to read the sensors, turn the sensor 36 on or off, or accept data from the sensors (col. 3, lines 30-47; col. 4, lines 1-27).

Regarding claim 1, neither of the above references nor any prior art of record disclose in their entirety, or in combination, the claimed mobile hybrid communication terminal alarm system, for enabling access to a communication network in a normal operation mode and alarming presence of an environmental hazard in an alarm mode, comprising: a communication terminal for connection to said communication network, adapted to exchange voice and data messages over the communication network; a

Art Unit: 2612

multi-sensor block for continuously monitoring the environment and providing a sensor reading signal indicative of a level of an environmental agent; an alarm mode controller for operating said communication terminal in one of an alarm mode and in a sleep power mode according to said sensor reading signal; and a power turn-on unit for permanently powering said multi-sensor block during the sleep power mode and the alarm mode.

Regarding claim 19, neither of the above references nor any prior art of record disclose in their entirety, or in combination, the claimed method of equipping a mobile communication terminal, with a multi-sensor block for monitoring the environment and generating a sensor reading signal indicative of the a level of a the hazardous agent, the mobile communication terminal being used in a normal operation mode for communicating voice and data over a communication network; operatively integrating a power turn-on unit with said mobile communication terminal for permanently powering said multi-sensor block; and further equipping said communication terminal with an alarm mode controller for continuously comparing said sensor reading signal with a threshold, detecting a threshold violation and initiating an alarm mode protocol.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
